

Directions for Wall Mount

If you are using the included plastic anchors to mount the camera, drill a 3/16" hole and insert the plastic anchors.

If you are mounting directly to wood or into a stud, drill a 1/16" hole pilot hole for the included screws.

For Outdoor Placement:

For outdoor placement the mount must be sealed properly. Use outdoor rated silicone caulk to seal all openings.

Seal in these locations:

1. Around the base of the mount where it contacts the wall.
2. Around the base of the camera where it attaches to the mount.
3. Around the mounting screws.

Failure to properly seal the mount to the applied surface may cause water intrusion and void camera warranty.
